

Jordan Avery Mercer

Brisbane — 0400 000 000 — jordan.mercer@example.com — LinkedIn — GitHub

Skills

Languages: Python, Java, TypeScript, JavaScript, SQL, C, R

Technologies: FastAPI, React, React Native, Expo, Knockout, AWS, Terraform, Docker, Celery, RabbitMQ, PostgreSQL, Oracle, SQLite

Tools: Git, SVN, Linux, Jira, IntelliJ, Vim

Work Experience

Riverbend State University

Feb 2026 – Present

Teaching Assistant – CS2400 – Foundations of Data Management

- Deliver hands-on lab sessions covering entity modelling, indexing, and query writing, walking students through worked examples and common failure modes so they can debug their own schemas.
- Assess weekly exercises and contribute feedback on the marking rubric to keep grading consistent across a cohort of roughly 120 students.

Meridian Systems Group (MSG)

Nov 2023 – Nov 2024; Feb 2025 – Dec 2025

Data Platform Intern – PL/SQL, Oracle – (clearance held)

- Profiled and tuned slow PL/SQL procedures during a multi-quarter Oracle-to-IBM migration, reducing execution time by 20–50% and refactoring logic so reports kept running as the backend was swapped out.
- Traced dependencies across dozens of base tables to reconstruct the reporting queries stakeholders relied on, validating outputs against known figures to catch discrepancies before they reached end users.

Meridian Systems Group (MSG)

Nov 2024 – Feb 2025

Frontend Engineer Intern – Javascript, Typescript, HTML+CSS, Knockout – (clearance held)

- Diagnosed and fixed a subscription-binding defect where the UI rendered every network peer under both transport types, isolating the state-management bug and restoring an accurate per-peer connection view.
- Overhauled how the dashboard resolved device labels, replacing an inconsistent naming path with the canonical convention so operators saw the correct hardware names throughout.
- Built out a Jasmine test suite for the label-resolution code, pinning behaviour across edge-case configurations and preventing the class of regressions that had caused the original bug.

Projects

OpenArbiter (github.com/example-user/OpenArbiter)

Python (FastAPI), Terraform, Celery, Task, Docker, PostgreSQL, AWS

- Owned the Problem service and contributed to the Submission service in a six-person team shipping an MVP coding platform with full test visibility, built as microservices communicating over a message queue.
- Designed RESTful APIs for problem management and submission handling, dispatching submissions to an asynchronous worker queue for downstream processing by a separate execution service.
- Stood up the AWS infrastructure with Terraform for automated deployment of containerised services, and wrote architecture diagrams and technical docs describing service interactions and deployment topology.

SurgeTrack (github.com/example-user/SurgeTrack)

Python (FastAPI), Terraform, Celery, Task, Docker, REST, SQLite/PostgreSQL, AWS

- Built a FastAPI backend with Celery-backed async workers to offload long-running analysis jobs, keeping API responses quick under concurrent load.
- Exposed query and aggregation endpoints (summaries, per-record results, status and outcome counts) with operational filtering by urgency and outcome.
- Load-tested with k6 under simulated surge models, ramping to 80 concurrent virtual users across mixed POST/GET/PUT and polling traffic; deployed to AWS with Terraform.

HireLoop (github.com/example-user/HireLoop/HireLoop)

React, Vite, Javascript, Bootstrap, Bash, Docker, PostgreSQL, PostgREST

- Built a React frontend (Router loaders/actions, state management) supporting applicant workflows and voice-recorded interview answers against a PostgREST-backed RESTful API.
- Containerised the frontend and the PostgreSQL + PostgREST backend with Docker, plus bash scripts to automate setup and teardown so the whole stack clones and runs locally end-to-end.

Education

Riverbend State University

Jun 2021 – Dec 2025

Bachelor of Computer Science and Commerce (Finance): *GPA: 6.2 / 7*

- **Relevant Coursework:** Data Structures and Algorithms, Software Architecture, Computer System Principles and Programming, Web/Mobile Programming, Relational Database Systems.

Additional Experience

Greenline Grocers – Fresh Produce Team Member

Feb 2025 – Present

University Football Society – Competitions Officer

Feb 2025 – Dec 2025

University Music Club – Treasurer

Feb 2024 – Feb 2025

Cornerstone Supermarkets – Fresh Produce Team Member

Aug 2019 – Oct 2025
